DBBC2 :

- wastro
- 32 x 64 MHz

R&D / SFXC

Version 5 released

Introduces “sliced integrations” (sub-)
1 integration divided > 1 node

less memory needed / node

longer t_{int} possible

better for $\gg n_{phase_center}$

faster turnaround of data

more responsive real-time plots

R&D / Projects / JUMPING JIVE

- pySCHED (refactoring SCHED to Python)
 - Delivered to EC end of Nov 2019
 - 63kLOC converted, 223kLOC FORTRAN remain
 - JIVE continues support/bug fixes/improvements
- Important new features:
 - automatic catalog synchronization w/ master
 - DBBC2 hardware support
 - Enable dynamic KEYIN schedule “template”:
 - embed executable Python code to express complex schedules
 - VEX2 schedule format output
 - added: scan INTENT from scheduling through post processing

R&D / Projects / JUMPING JIVE

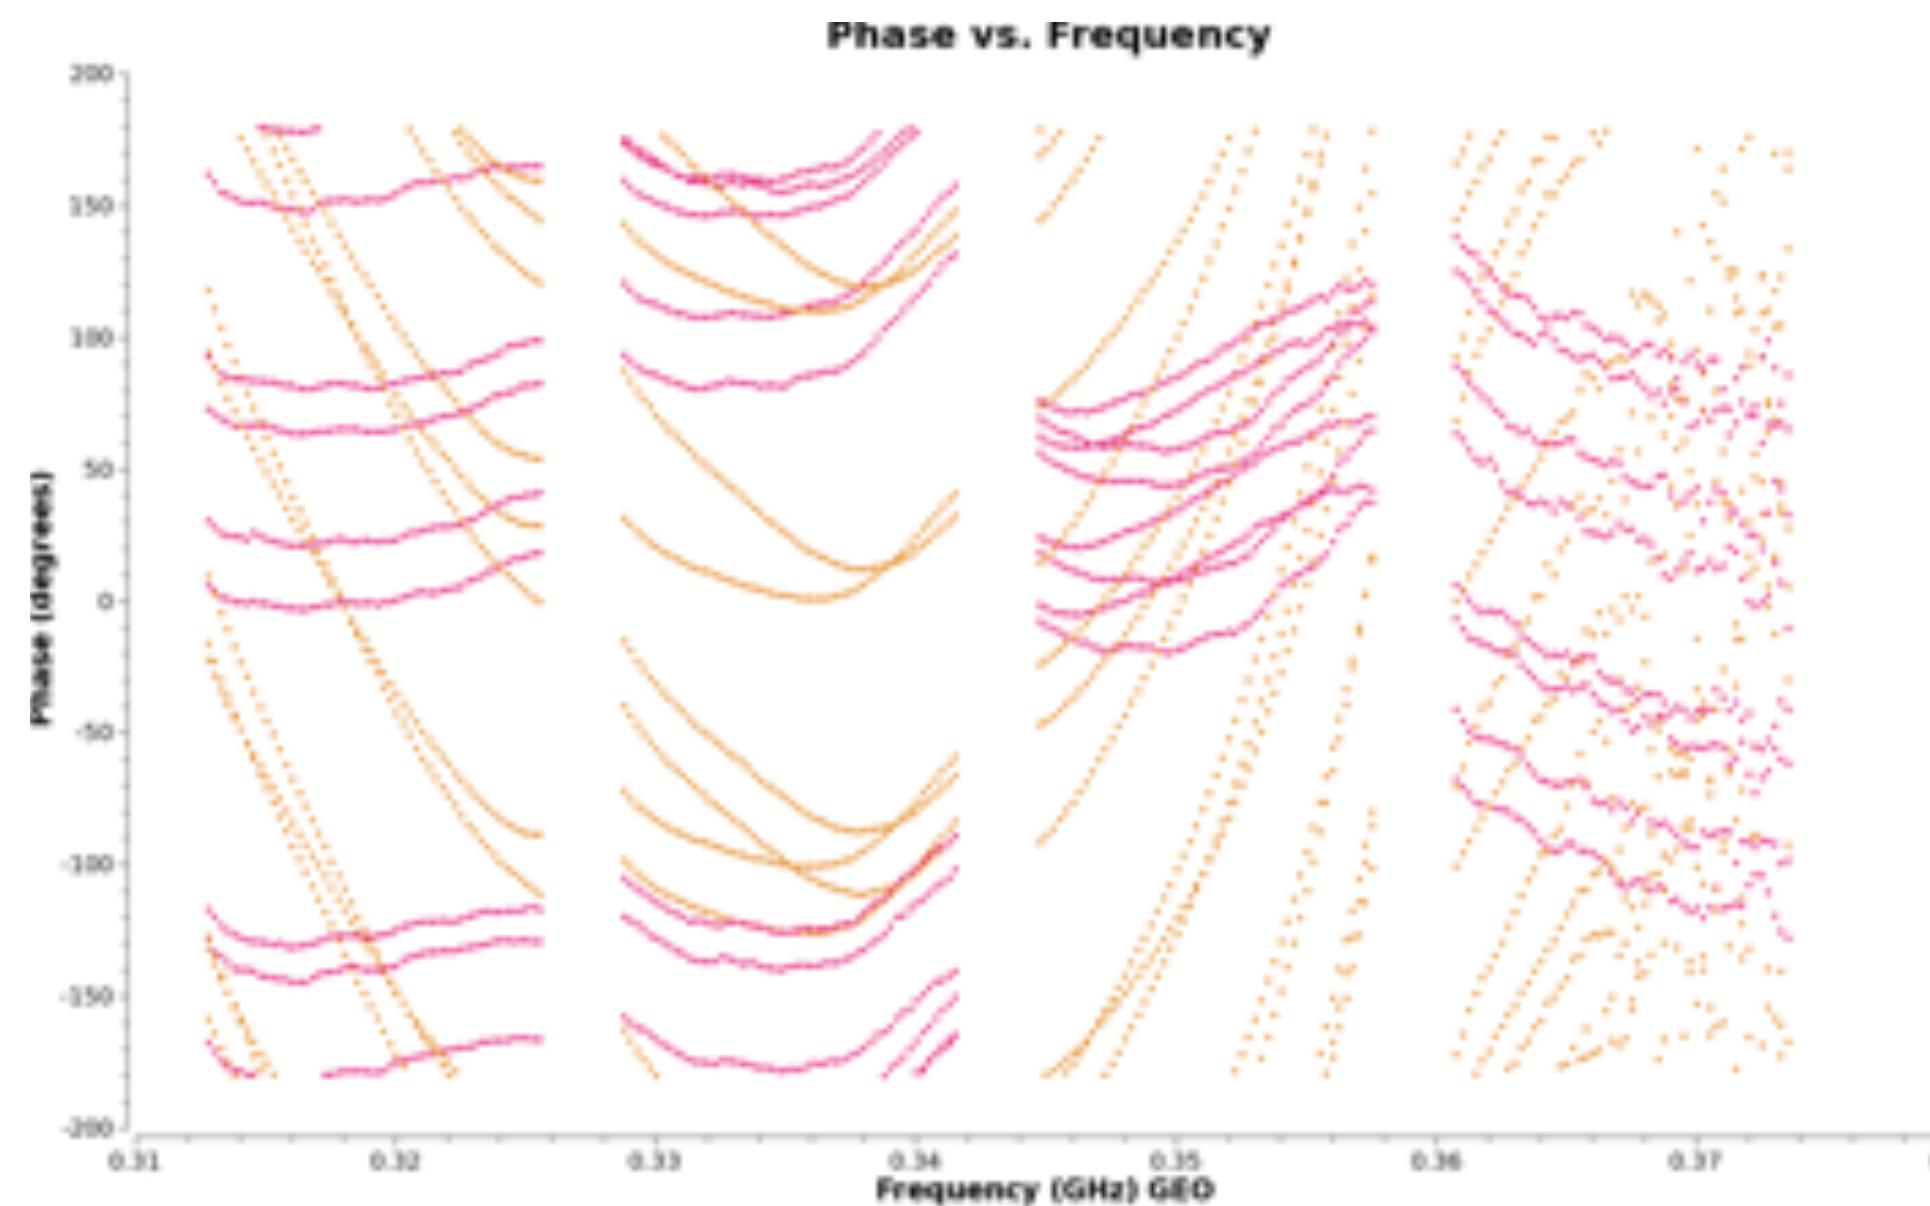

- pysCHED (refactoring SCHED to Python)
 - Delivered to EC end of Nov 2019
 - 63kLOC converted, 223kLOC FORTRAN remain
 - JIVE continues support/bug fixes/improvements
- Important new features:
 - automatic catalog synchronization w/ master
 - DBBC2 hardware support
 - Enable dynamic KEYIN schedule “template”:
 - embed executable Python code to express complex schedules
 - VEX2 schedule format output
 - added: scan INTENT from scheduling through post processing

Bob Eldering/ eldering@jive.eu

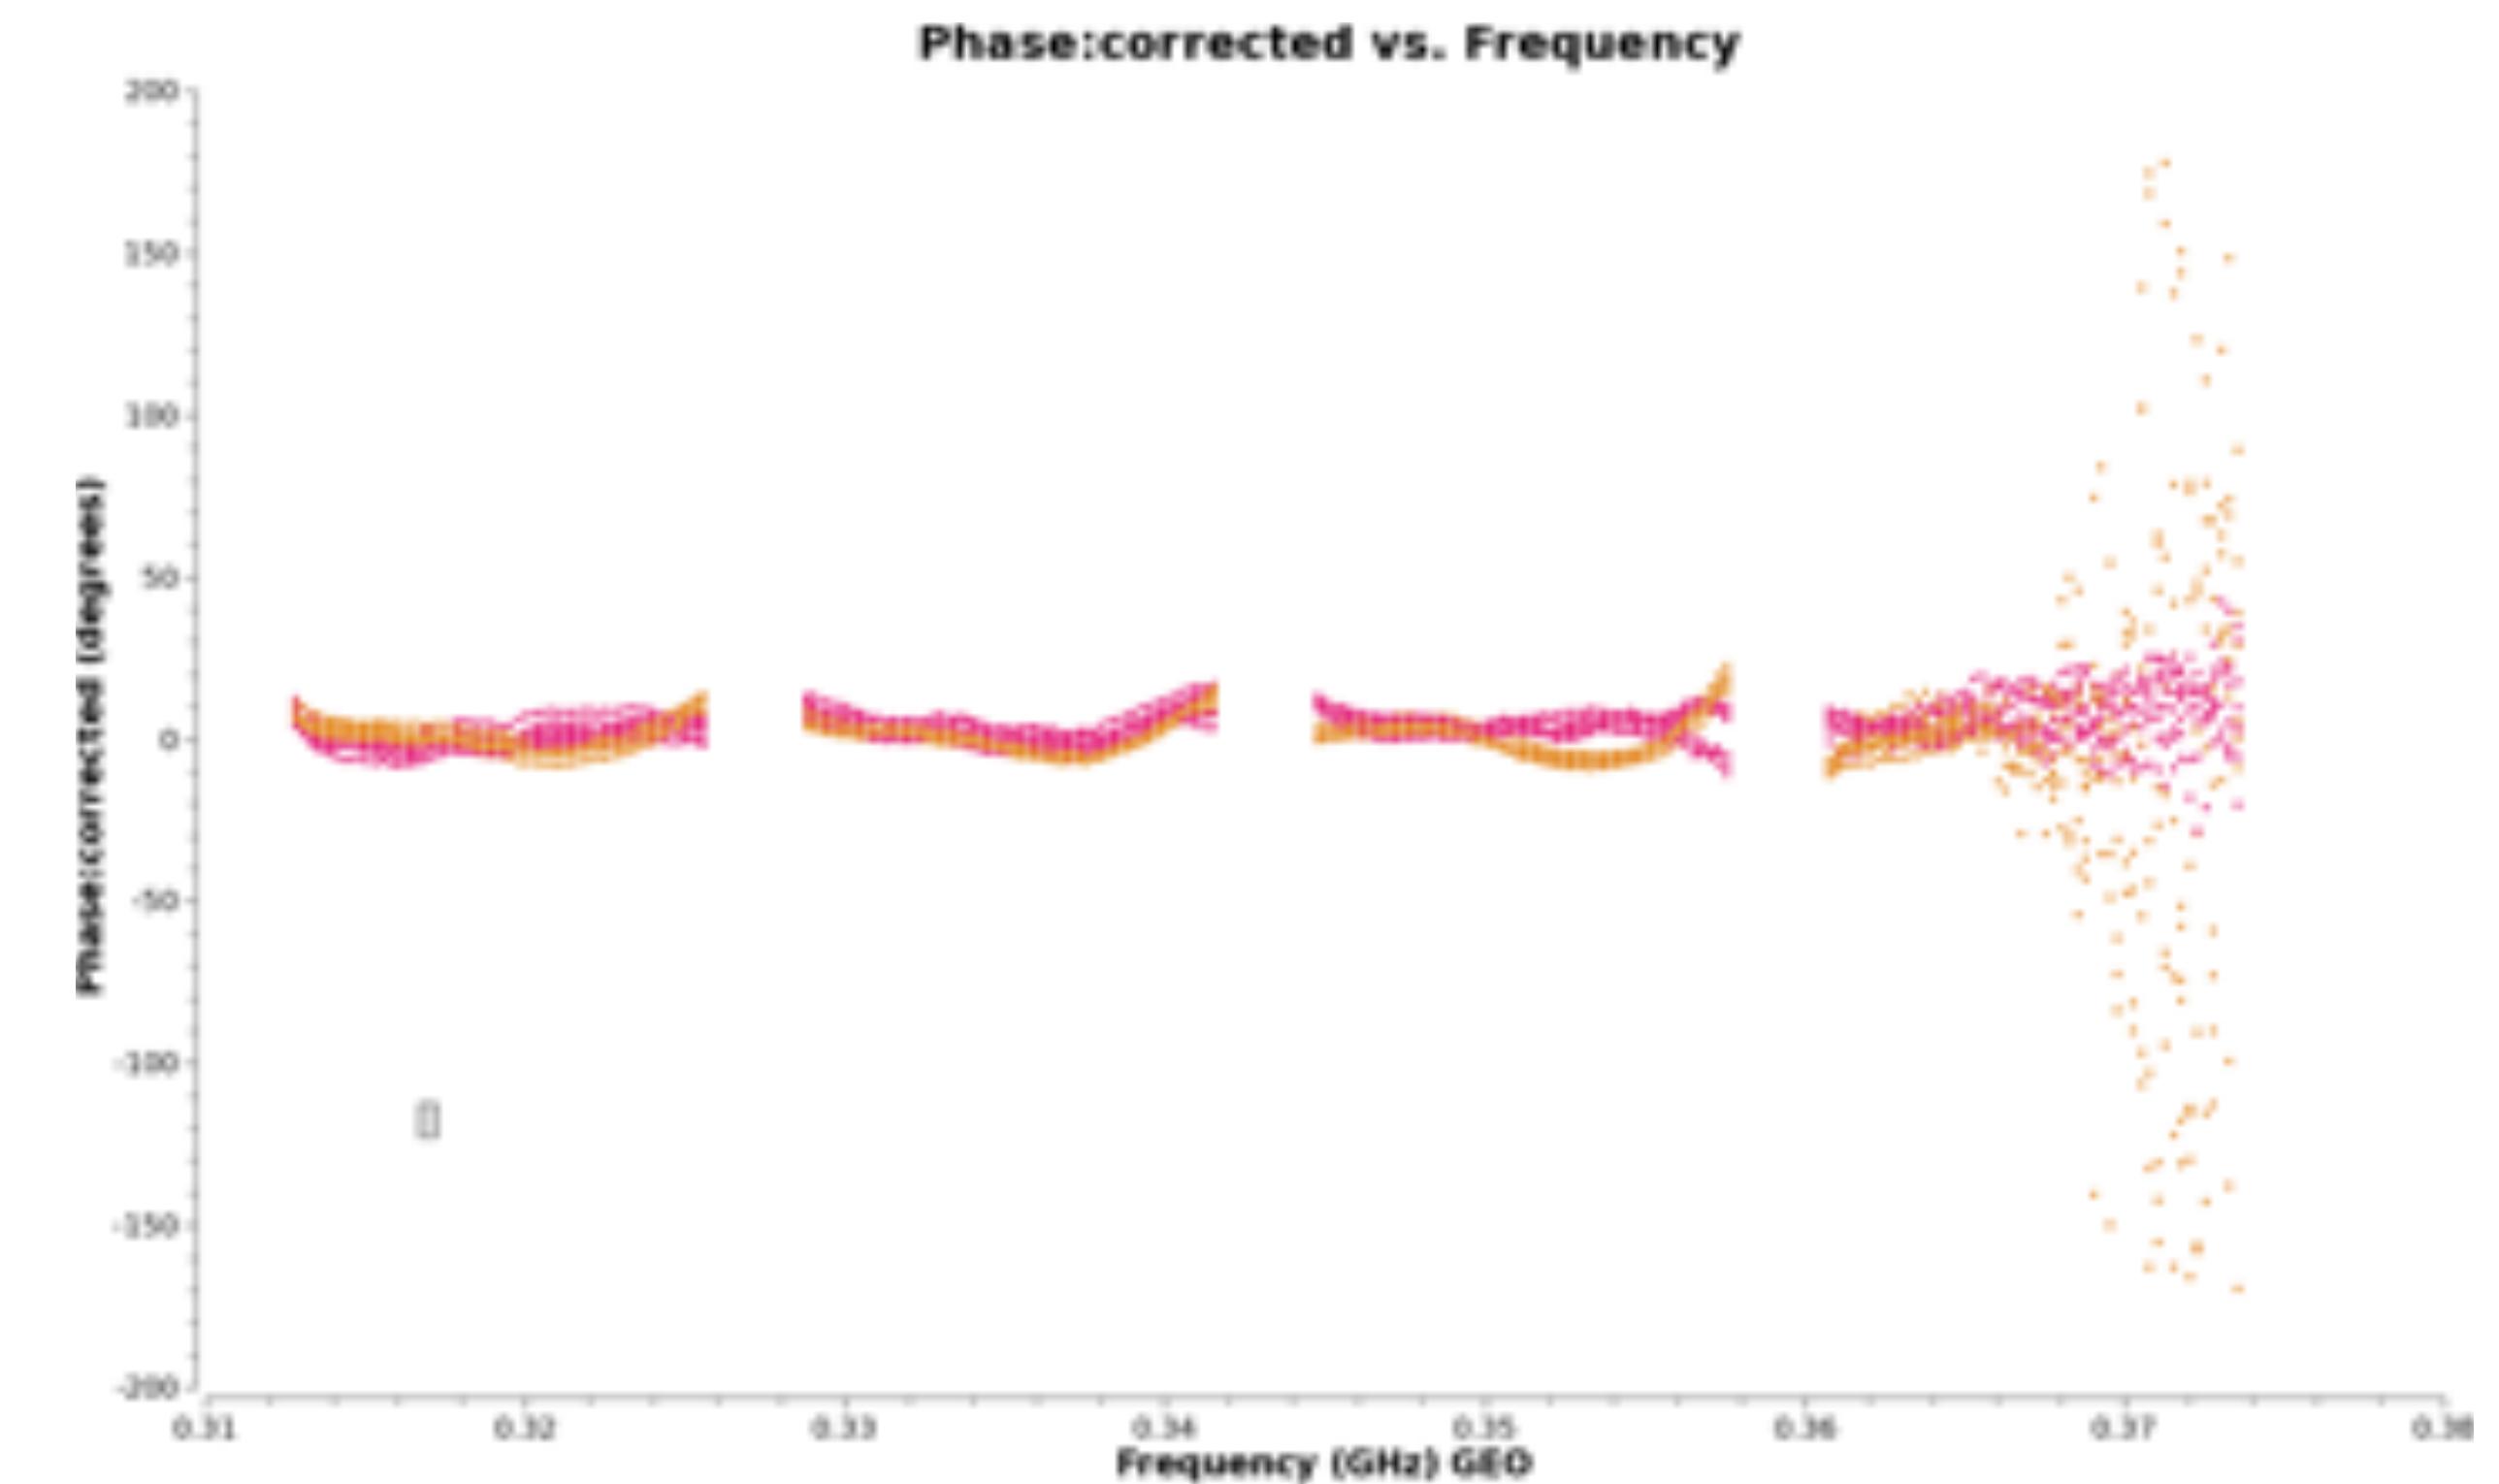

R&D / Projects / RadioNet RINGS

- fringe fitters under active development
 - Delivered to EC end of Feb 2020
 - wide-band, widely separated bands (VGOS!) , dispersive delay (low frequency - LOFAR et al)

Before dispersive delay correction:

After!

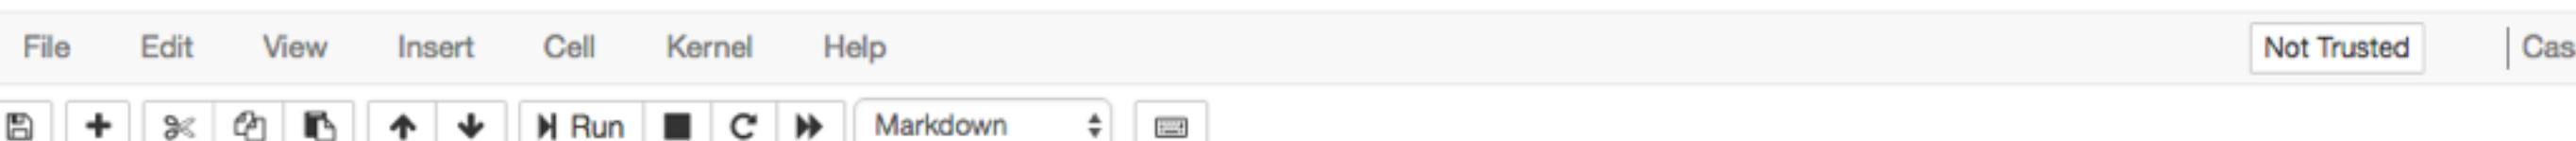

Des Small/ small@jive.eu

R&D / Projects / RadioNet RINGS

- fringe fitters under active development
 - Delivered to EC end of Feb 2020
 - wide-band, widely separated bands (VGOS!), dispersive delay (low frequency - LOFAR et al)
 - JIVE continues support/bug fixes/improvements
- Could enter CASA mainstream this year

R&D / Projects / ESCAPE

- WP3 Open source Software and Service Repository
 - CASA6 Jupyter kernel with added scripts to load (EVN) calibration data

The notebook interface to CASA was developed by Aard Keimpema at the [Joint Institute for VLBI ERIC \(JIVE\)](#). Installation in the sandbox interface (based on [tmpnb](#)) was done by Tammo Jan Dijkema at [ASTRON](#). This work is a part of the [ASTERICS](#) project, Astronomy ESFRI & Research Infrastructure Cluster ASTERICS - 653477.

This notebook interface was built on top of CASA 5.4.0. Adoptions were made to run it on a newer version of Python than the one distributed with CASA. Future development of this notebook, or upgrading the underlying CASA version, is currently being planned.

```
In [1]: casa['build']['version']  
Out[1]: '5.4.0-68'
```

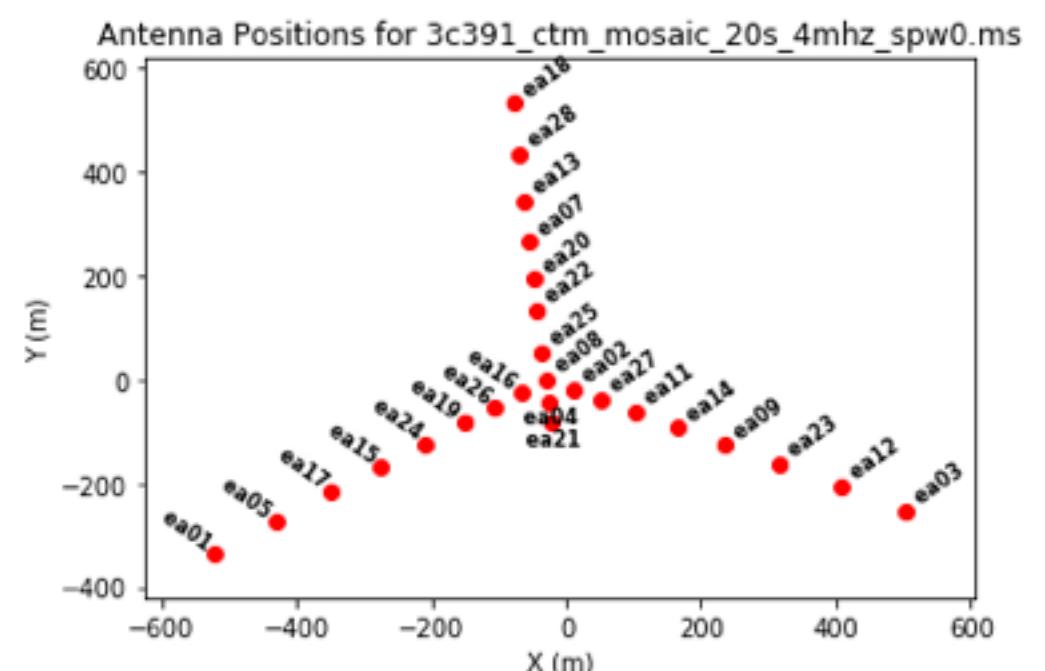

The current notebook is taken from the [VLA Continuum Tutorial](#). The dataset inside this sandbox has been averaged down considerably in size, the original was 3GB data, so the results will be worse than in the tutorial.

NB: This container is for demonstration purposes only, it will be deleted automatically after 5 minutes of inactivity

Tutorial, inspect the data

To get a sense of the array, as well as identify an antenna for later use in calibration, we use the task `plotants`.

```
In [2]: plotants(vis='3c391_ctm_mosaic_20s_4mhz_spw0.ms',  
            figfile='plotants_3c391_antenna_layout.png')  
clearstat() # This removes the table lock generated by plotants in script mode  
  
Number of points being plotted: 26  
  
/usr/local/lib/python2.7/dist-packages/matplotlib/figure.py:457: UserWarning: matplotlib is currently using a non-GUI  
backend, so cannot show the figure  
"matplotlib is currently using a non-GUI backend, "
```

Show log

Aart Keimpema / keimpema@jive.eu

R&D / Projects / ESCAPE

- WP3 Open source Software and Service Repository
 - CASA6 Jupyter kernel with added scripts to load (EVN) calibration data
 - Improving/debugging CASA VLBI related tasks, such as `importfitsidi` and working on various calibration tasks

Mark Kettenis/ `kettenis@jive.eu`

R&D / Projects / ESCAPE

- WP4 Connecting ESFRI projects to EOSC through VO framework
 - Enable access to EVN archive @ JIVE through the Virtual Observatory (VO)

VO Explorer - X-ray clusters

File Edit View Resource Interop Window Help

The search named: X-ray clusters

Contains resources which match **all** of the following conditions:

Waveband	is	X-ray		
Subject	contains	cluster

R&D / Useful stuff

A screenshot of a software interface showing a list of files and selection details. The list includes:

	No	Size
1	No0079	43.19G
2	No0080	69.58G
3	No0081	70.54G

Below the list, it says 'Selection size: 7.328T (99 items)'. At the bottom right, there are two checkboxes: ' Mark6 format' and ' Show file chunks', with the 'Mark6 format' checkbox highlighted by a red oval.

Bob Eldering/ eldering@jive.eu

R&D / Useful stuff

jive5ab 3.0.0

R&D / jive5ab 3.0.0

- Organization:
 - github + CMake
- New feature:
 - record VDIF frames in separate recordings (configurable)
 - **m6sg_mount** - mount/unmount/initialize Mark6 disk packs from command line
- Fixes:
 - **scan_check?** with high data rate recordings
 - partial last block written
- Documentation improved:
 - section on Mark6/FlexBuff, split VDIF recording
 - missing, new commands documented
 - correct availability (e.g. **scan_set=** on FlexBuff/Mark6)

Thanks for your
attention!
