

Technical Operations, R&D

JIVE

Joint Institute for VLBI
ERIC

Current hardware

1 100 Gbps

17 FlexBuff

3 Mark6

25 Mark5 ↓

1012 SFXCcores

R&D / \geq 4 Gbps observations

4 Gbps e-VLBI

- FiLa10G split into 2 x 2 Gbps
- **not** at Ef (FiLa10G hardware prob?)
 - same firmware everywhere, **Ef stops < 15ms**

R&D / \geq 4 Gbps observations

4 Gbps e-VLBI

- FiLa10G split into 2 x 2 Gbps
- **not** at Ef (FiLa10G hardware prob?)
 - same firmware everywhere, **Ef stops < 15ms**

32 Gbps recorded

- planned end Jan 2021: Ef, Ys, 2x On, T6

R&D / \geq 4 Gbps observations

4 Gbps e-VLBI

- FiLa10G split into 2 x 2 Gbps
- **not** at Ef (FiLa10G hardware prob?)
 - same firmware everywhere, **Ef stops < 15ms**

32 Gbps recorded

- planned end Jan 2021: Ef, Ys, 2x On, T6
- **Ef, Ys DBBC3 still out for repair**

R&D / \geq 4 Gbps observations

4 Gbps e-VLBI

- FiLa10G split into 2 x 2 Gbps
- **not** at Ef (FiLa10G hardware prob?)
 - same firmware everywhere, **Ef stops < 15ms**

32 Gbps recorded

- planned end Jan 2021: Ef, Ys, 2x On, T6
- **Ef, Ys DBBC3 still out for repair**
- **Oe cry problem one week before test**
 - **#-of-stations down to two ...**

New stable released

- Found & fixed some correlator freezes!
 - e.g. race condition on variable initialization order

New stable released

- Found & fixed some correlator freezes!
 - e.g. race condition on variable initialization order
- Improvements
 - sub microsecond t_{int} coherent dedispersion for FRB structure

Frequency vs. Time

Highly polarised microstructure from the repeating FRB 20180916B

K. Nimmo, J. W. T. Hessels, A. Keimpema, A. M. Archibald, J. M. Cordes, R. Karuppusamy, F. Kirsten, D. Z. Li, B. Marcote, Z. Paragi
arxiv:2010.05800, to be published in Nature Astronomy

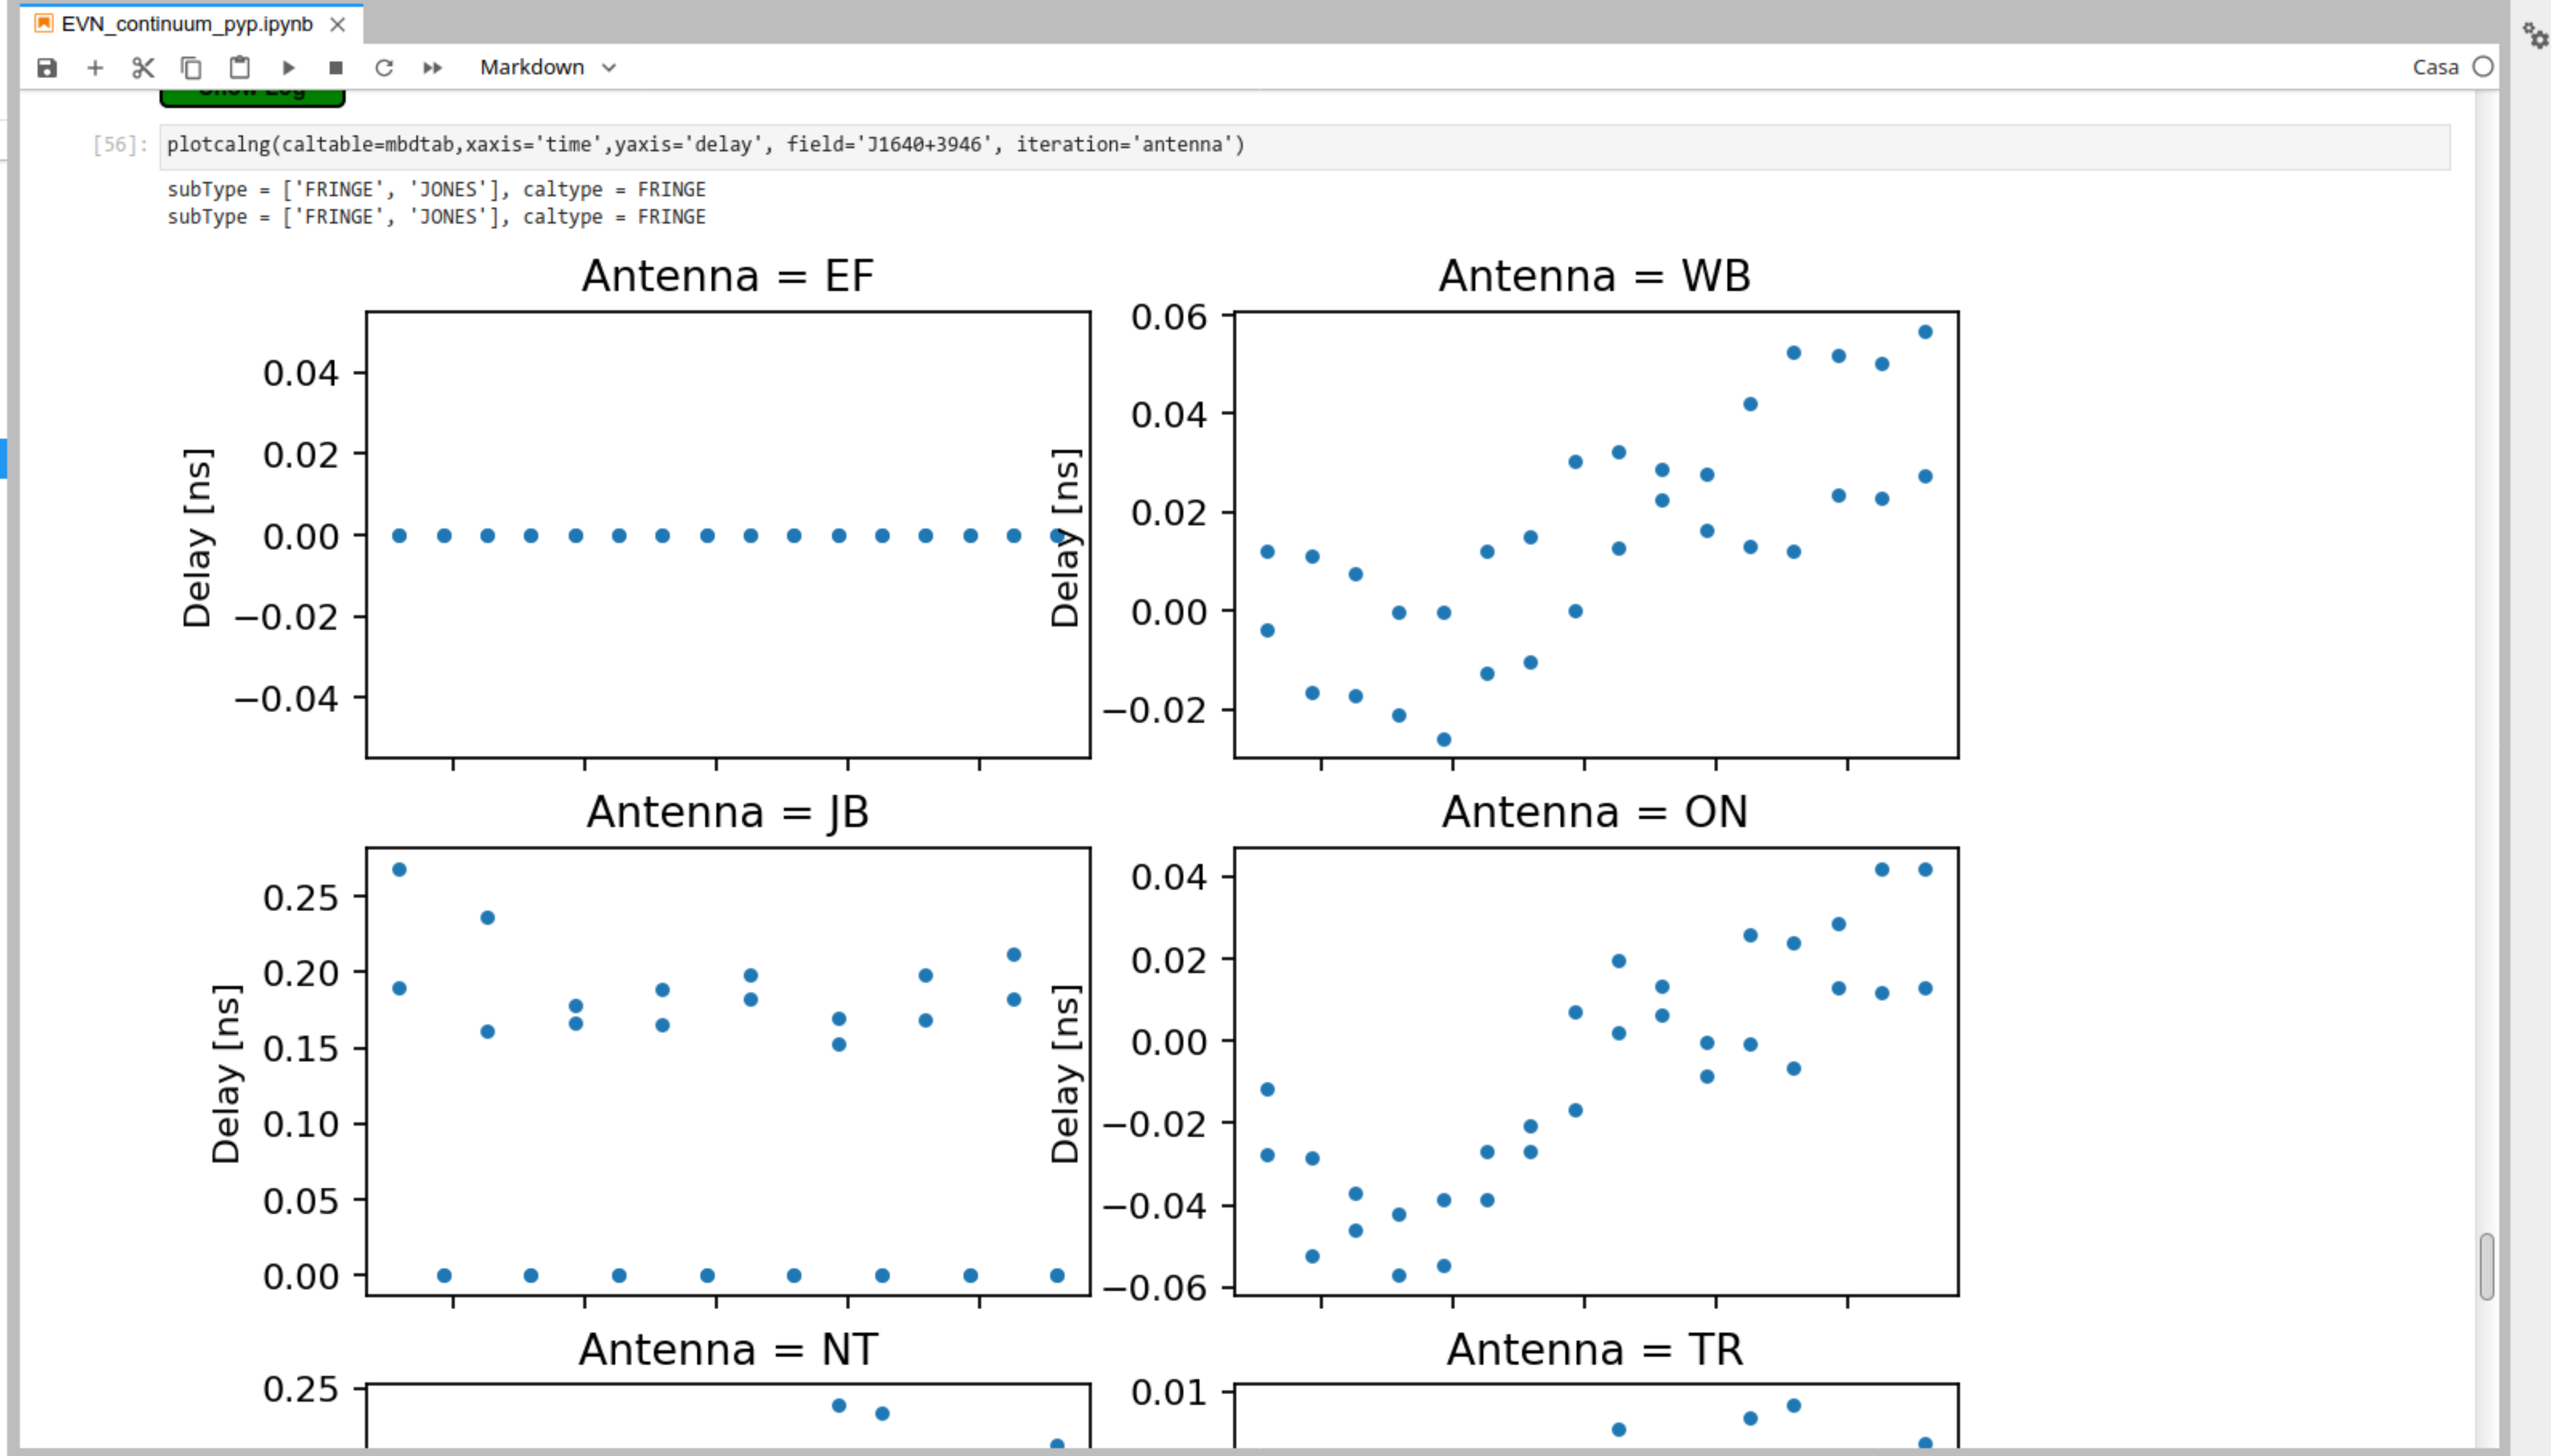

In current CASA release (“any day now”)

- fringe fit improvements
- importfitsidi fixes/improvements
- gain curve support
- per-scan interpolation in development

WP3 Open Source Software Registry

- development of replacement plotcal CASA5 task
 - removed from CASA6
 - integrates natively with Jupyter notebook

WP4 Connecting ESFRI projects to EOSC through VO framework

- EVN archive parsed & converted to VO database
- VO service server hardware purchased+installed
- experimental VO interface online

WP5 ESFRI Science Analysis Platform

- Jupyterhub server hardware purchased+installed
- experimental online
- development of Jupyterlab plugin
 - download EVN data using V0 protocol

Technical operations

- New virtual machine cluster
 - runs vital EVN/JIVE services/hosts (Mattermost, planobs, ...)

Technical operations

- New virtual machine cluster
 - runs vital EVN/JIVE services/hosts (Mattermost, planobs, ...)
- Prepare for doubling of storage
 - reinforcing the floor (double the HDD weight!)
 - extra mains, network connections, cooling, ...

Technical operations

- New virtual machine cluster
 - runs vital EVN/JIVE services/hosts (Mattermost, planobs, ...)
- Prepare for doubling of storage
 - reinforcing the floor
 - extra mains, network connections, cooling, ...
- `archive.jive.nl`
 - modernized, some security/accessibility fixes
 - should be replaced this year

Thanks for your
attention!
