

Primary beam status

Aard Keimpema

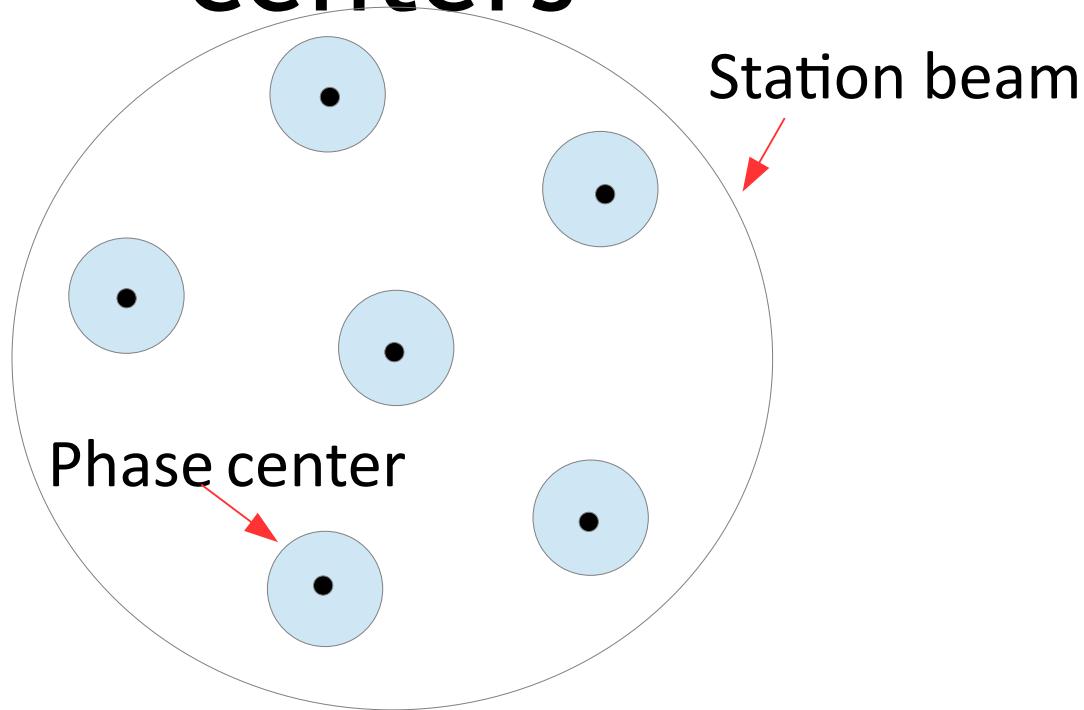

keimpema@jive.eu

JIVE

Joint Institute for VLBI
ERIC

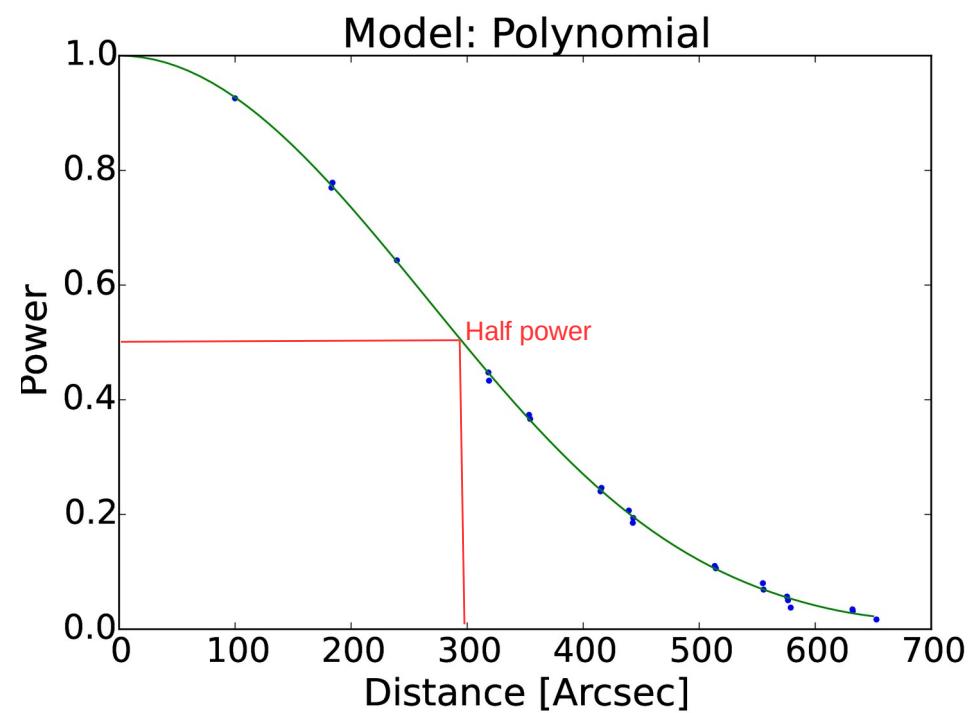

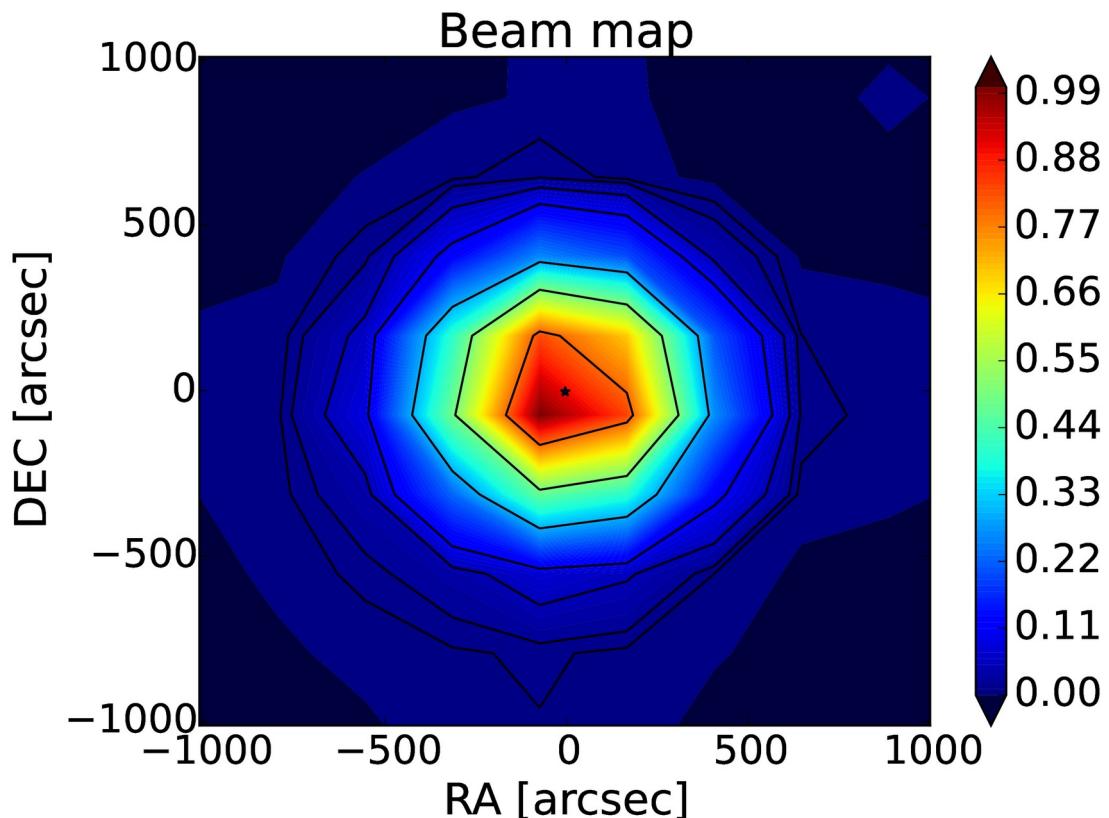

Multiple simultaneous phase centers

- VLBI wide field data sets are huge $\gg 1\text{TB}$
- Solution: create narrow field data sets for all source in the beam
- Largest experiments > 600 sources!
- EVN is heterogeneous: each station's primary beam is different distorting the final image when uncorrected

Beam maps

Effelsberg @21 cm, target 3C286

- Series of deliberate mispointings around a point source
- Beam model is least-squares fitted to this data

Measuring beam maps

- Uwe Bach's instructions and FS scripts
 - <https://github.com/evn-vlbi/BeamMaps>
- EVN Mattermost discussion channel: **#Holog Beammap**
- L Band is most important (but please measure all bands)
- Supported data formats: FITS, ASCII table
- Example ASCII data:

RA offset	DEC offset	LCP	RCP
-0.196584	-0.154995	0.118596	0.147875
-0.171007	-0.155042	0.246834	0.120844
-0.142839	-0.154967	0.039953	0.127841
-0.114712	-0.154985	0.119025	0.097853

- Send data to keimpema@jive.eu

Current status

The screenshot shows a web browser window with the URL https://deki.mpifr-bonn.mpg.de/Working_Groups/EVN_TOG/Beam_maps. The page title is "Beam maps". The left sidebar contains a navigation menu with sections like "MPIfR Deki", "Working Groups", "EVN TOG", "Beam maps", and "DBBC". The main content area displays a table titled "Current status of the availability of beam maps at the stations". The table has columns for station names (Ar, Bd, Ef, Hh, Jb, KVN, Mc, Mh, Nt, On, Sr, T6) and frequency bands (L Band, C band, M band, X band, K band, Q band). The "Last updated" column shows dates ranging from 19-06-2015 to 24-11-2020. The "Notes" column provides details about specific maps sent to JIVE, such as "Maps sent to JIVE (elevation ranges 22-35; 53-73 degrees) @1550 MHz" for station Sr.

	L Band	C band	M band	X band	K band	Q band	Last updated
Ar							
Bd	in progress	1406 1610 sent to JIVE	NA	1710 sent to JIVE	in progress	NA	23-11-2017
Ef	at JIVE	at JIVE	?	available	available	?	19-06-2015
Hh	In progress	In progress					18-06-2015
Jb							
KVN	-	-	-	-	available	available	10-06-2015
Mc	at JIVE @1413MHz @1397MHz	Work in progress.	Work In progress	Work in progress	Work in progress	-	08-01-2021
Mh	-	-	-	no	no	no	09-06-2015
Nt							
On	at JIVE	at JIVE	at JIVE				
Sr	Maps sent to JIVE (elevation ranges 22-35; 53-73 degrees) @1550 MHz	-	Maps sent to JIVE (elevation ranges 12-17; 17-22; 26-32; 34-40; 42-48; 50-56; 58-64; 66-72; 76-84 degrees) @6900 MHz	-	Maps sent to JIVE (elevation ranges 20-40; 40-60; 60-80 degrees) @21975 MHz	-	24-11-2020
T6							

~60% of L-Band maps done

Airy Disk Beam Model

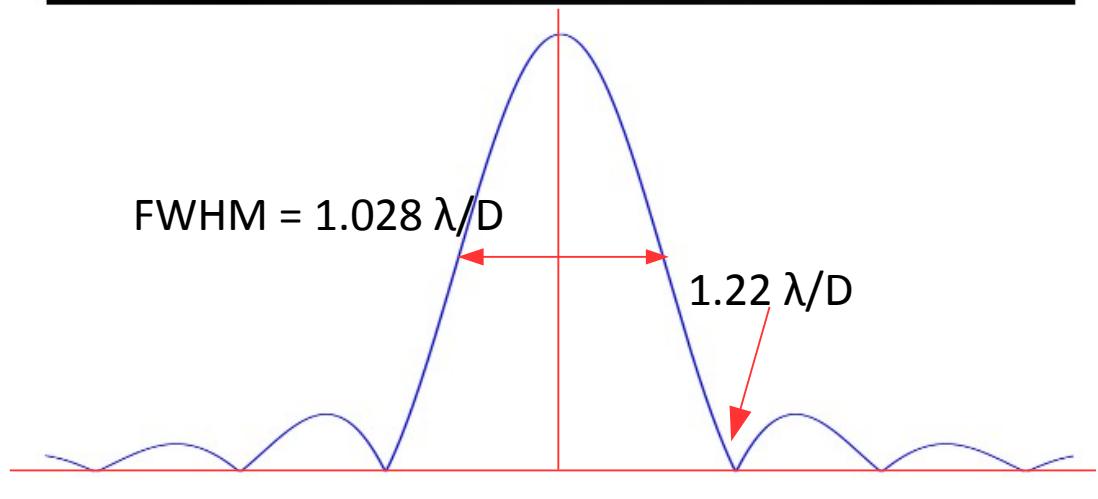

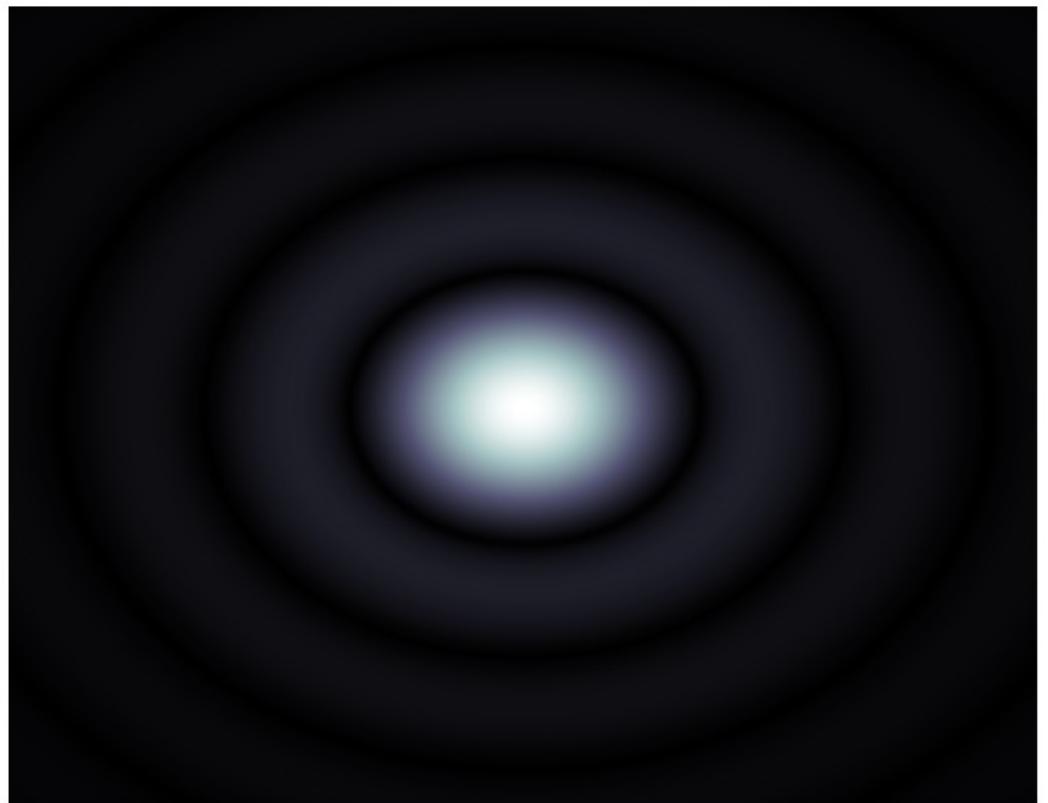

First order model : Uniformly illuminated circular aperture (Airy Disk)

$$I(\theta) = \left| \frac{2 J_1(z)}{z} \right|^2, z = \frac{\pi D}{\lambda} \sin(\theta)$$

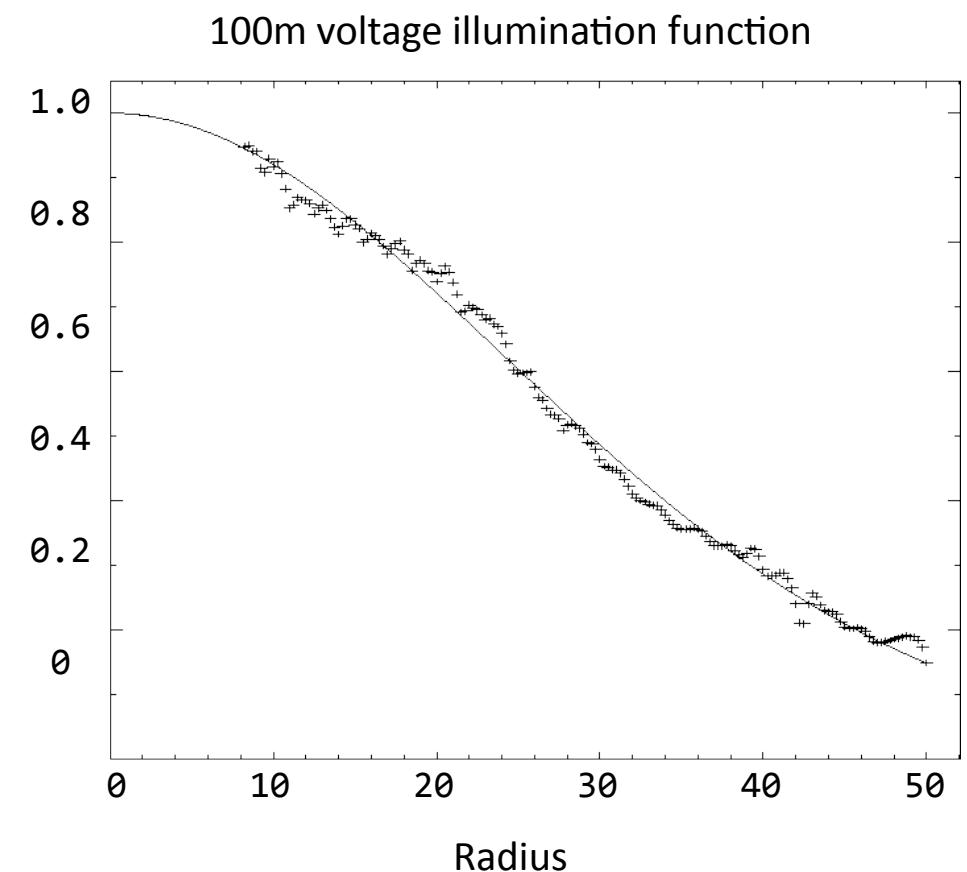

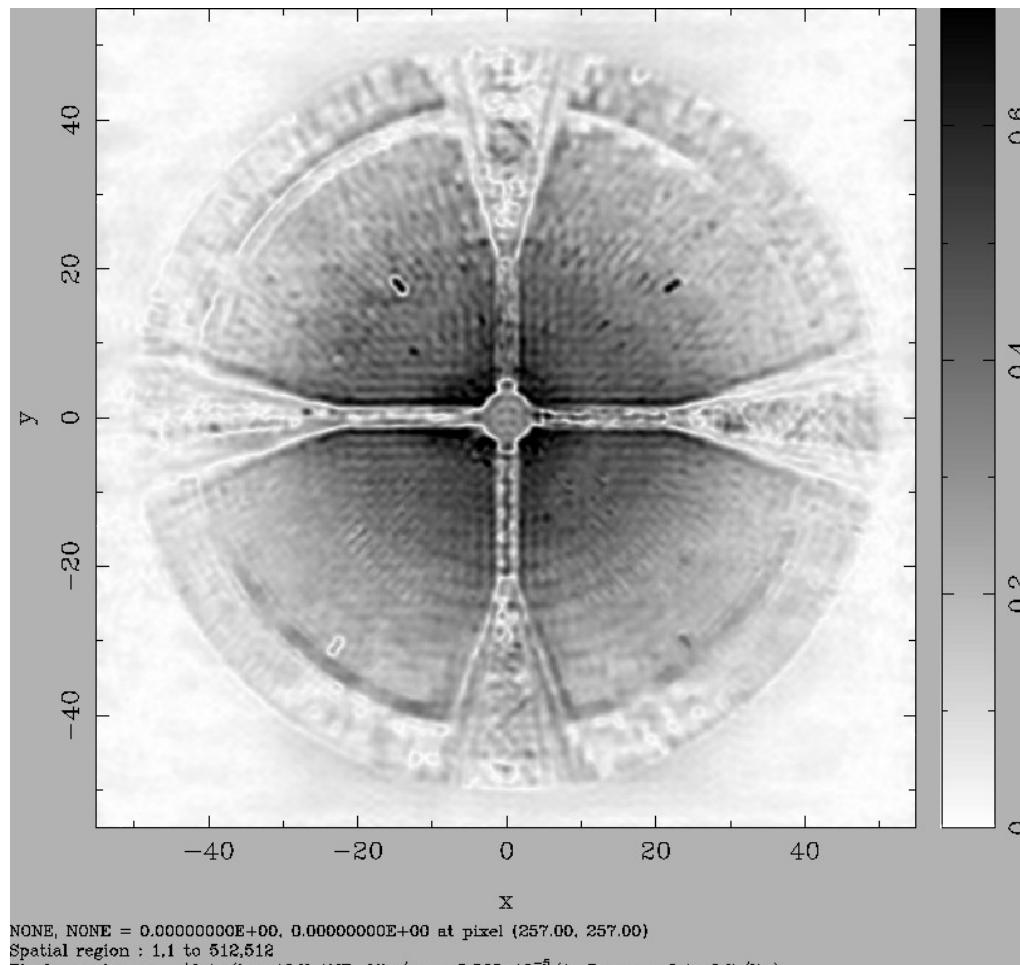

D = Dish diameter,

λ = wavelength

$J_1(z)$ = Bessel function of the first kind

Effelsberg illumination pattern @11.7 Ghz

The Effelsberg Holography Campaign - 2001

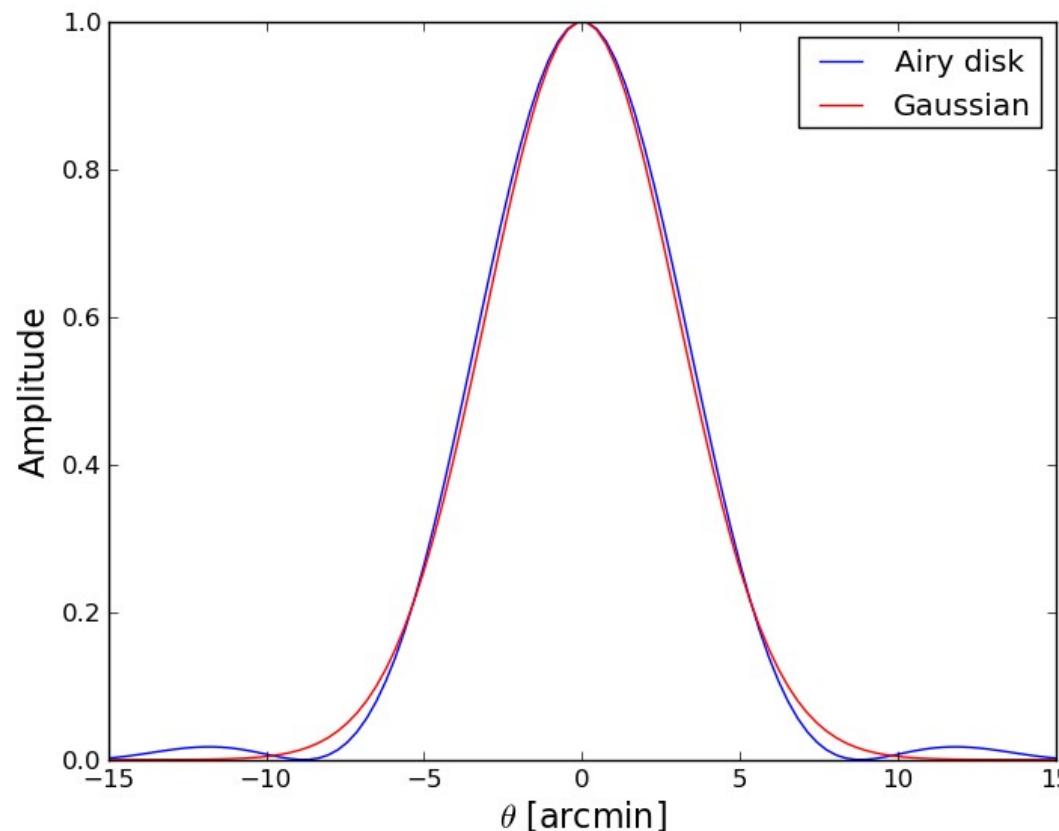

M.Kesteven, D.Graham, E.Fürst, O.Lochner & J.Neidhöfer

Gaussian model

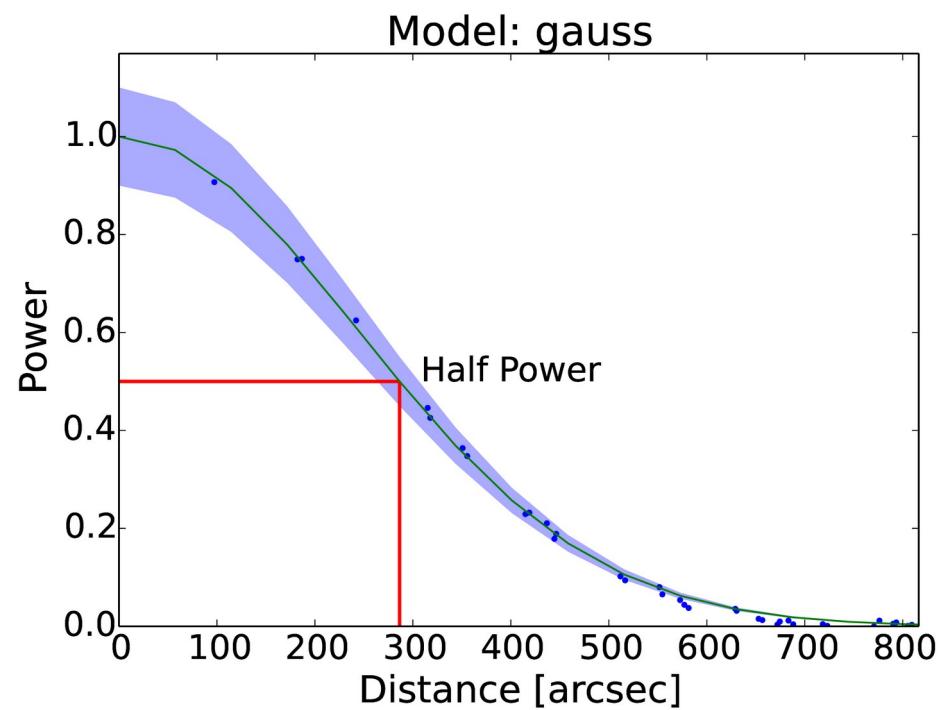

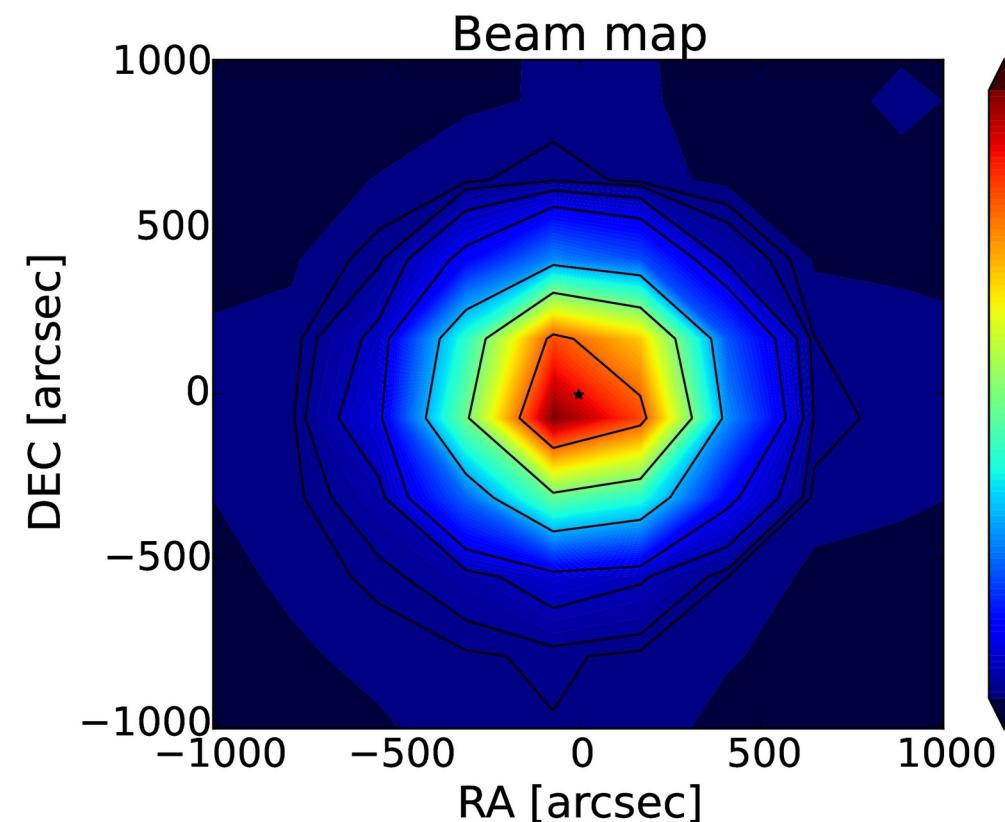

- The Airy disk model can very closely be approximated by a Gaussian model

$$I(\theta) = A_0 e^{-\frac{\theta^2}{2\sigma^2}}$$

- The optimum fit is $\sigma = 0.42\lambda/D$, for apperture of width D

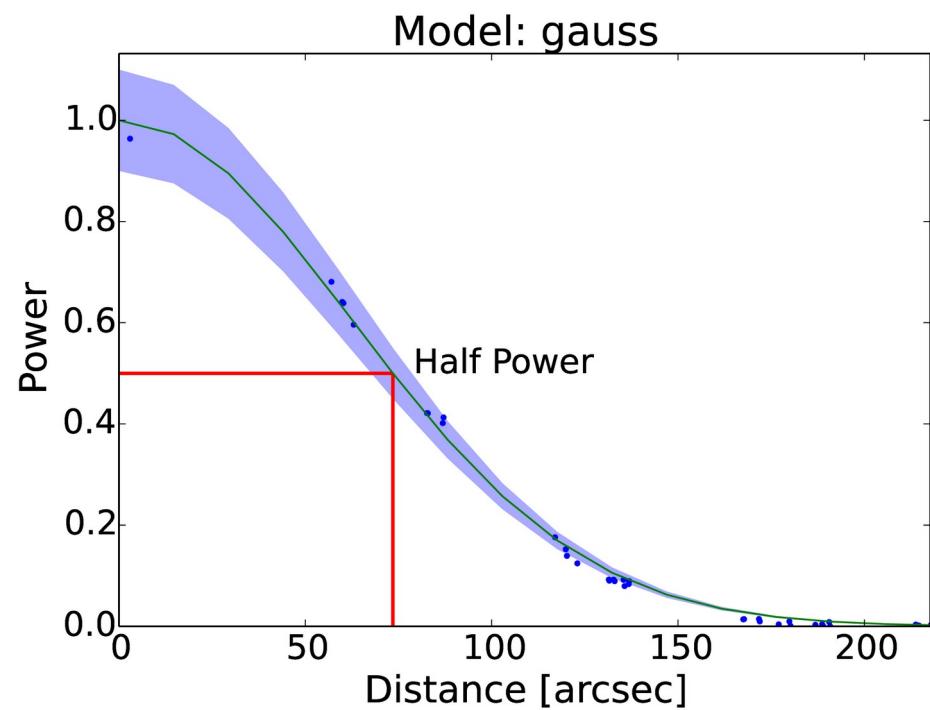

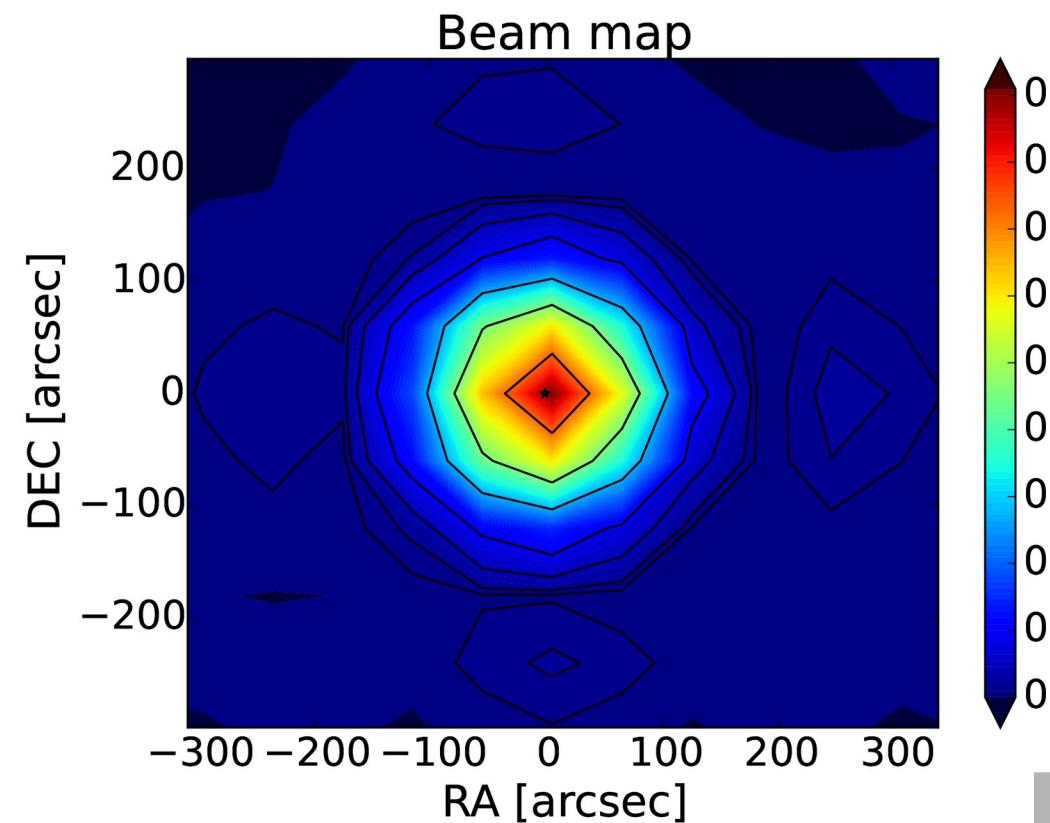

Effelsberg @21CM, RCP

$$\text{Model: } I(x, y) = e^{-\frac{(x-x_0)^2 + (y-y_0)^2}{2(z\lambda)^2}}$$

	RCP	LCP
X0	-6.88441"	-3.68020"
Y0	-3.42791"	-2.98701
Z	1151.51	1151.6
FWHM	572.9"	574.9"
D _{eff}	75.2 M	75.0 M

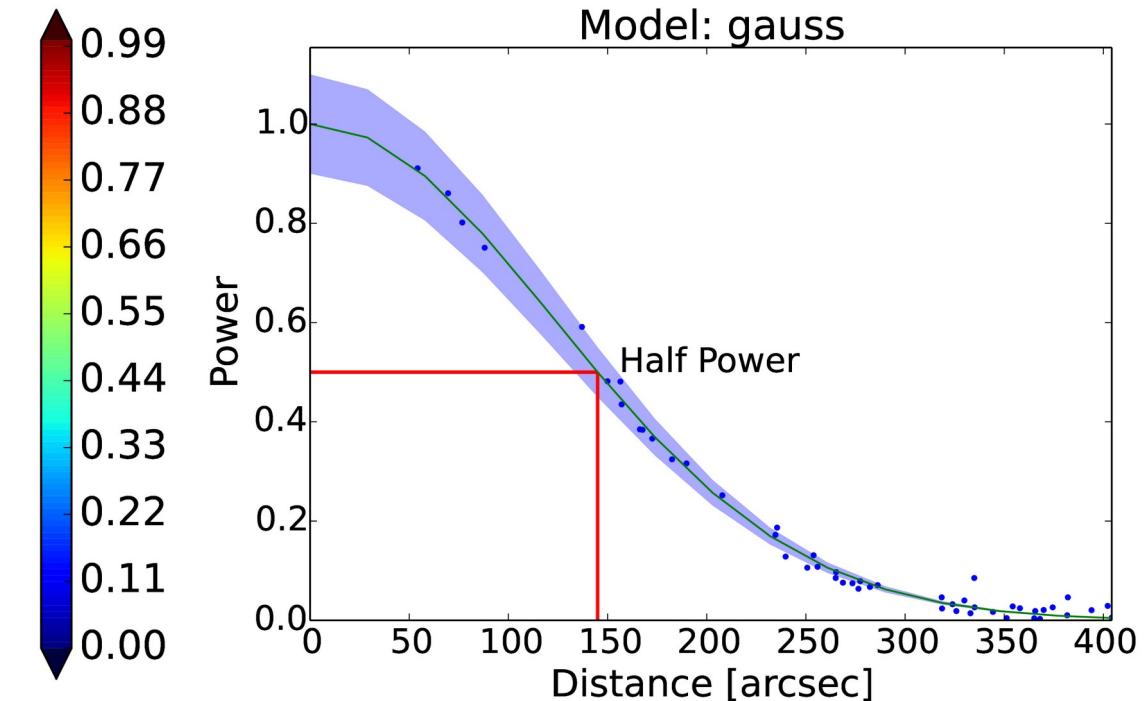

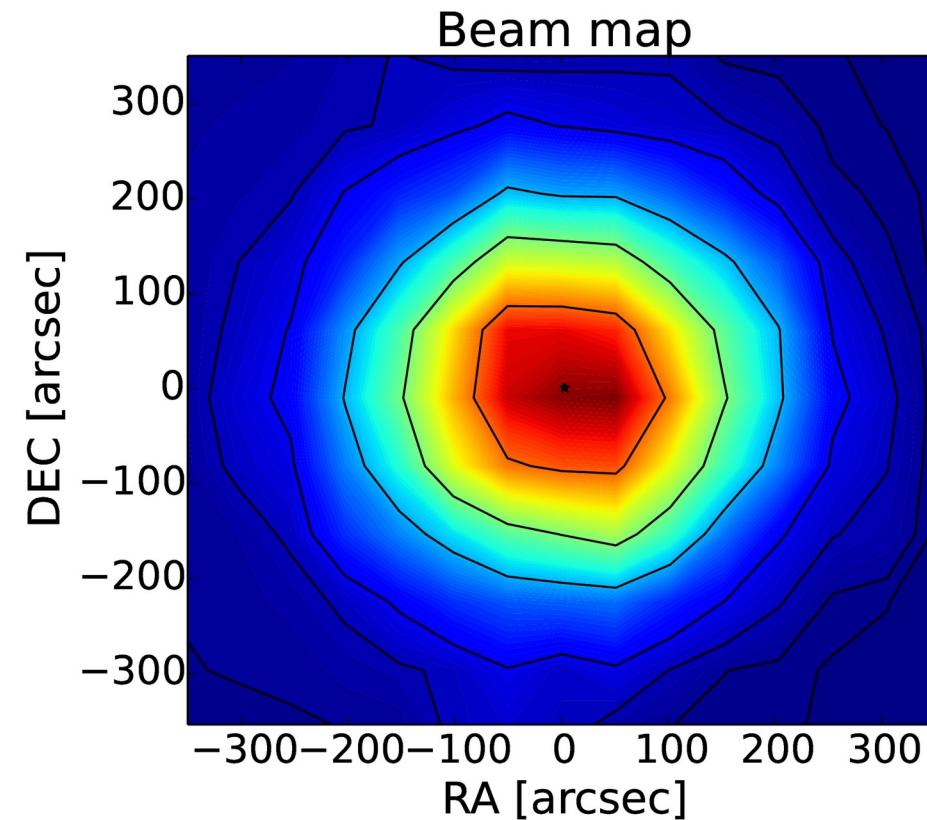

Effelsberg @6CM, RCP

$$\text{Model: } I(x, y) = e^{-\frac{(x-x_0)^2 + (y-y_0)^2}{2(z\lambda)^2}}$$

	RCP	LCP
X0	7.985279"	-1.191061"
Y0	-0.154405"	0.081825"
Z	1009.2	1017.3
FWHM	147.0"	148.2"
D _{eff}	85.8 M	85.1 M

Yebes @6CM, RCP

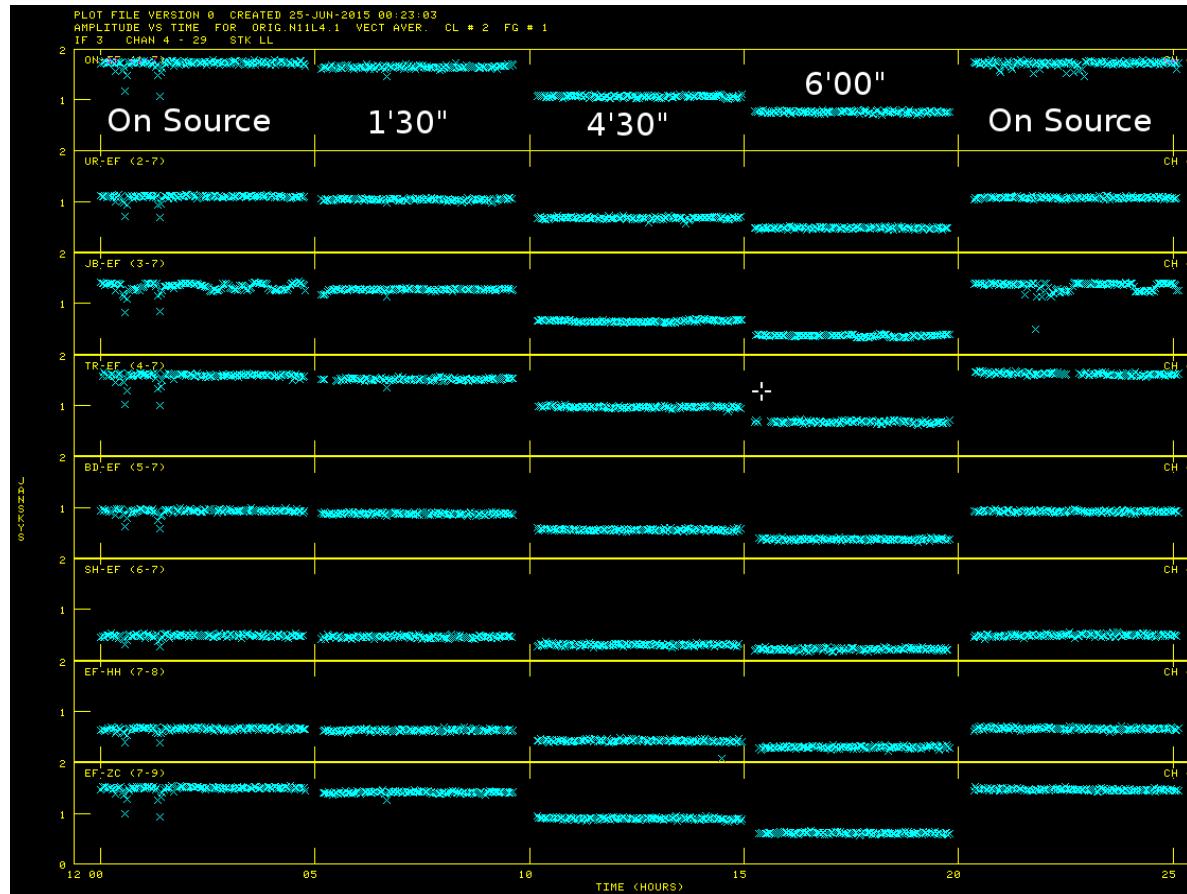

$$\text{Model: } I(x, y) = e^{-\frac{(x-x_0)^2 + (y-y_0)^2}{2(z\lambda)^2}}$$

	RCP	LCP
X0	2.807198"	-0.363737"
Y0	0.695973"	-4.880469"
Z	2052.1	2060.1
FWHM	289.9"	290.5"
D _{eff}	42.2 M	42.1 M

EVN Pipeline application

- Primary beam corrections are applied in the EVN pipeline
- Currently corrections are only available in AIPS
- Corrections are stored in SN table containing all sources
