EVN TOG Meeting

Medicina station

Period March – Sep 2018

A. Orfei, G. Maccaferri, A. Orlati

1) Antenna

The replacement of the azimuth wheel track and a preventive maintenance on the second azimuth driving wheel has been completed in the last week of July.

The air conditioning system for apparatuses in the cabins of the antenna has been completely changed in September.

2) VLBI back-end

The Flexbuff system of Medicina has been upgraded with new disks. Now the capacity available is 360 TB. Medicina has also provided the same amount of TB for JIVE correlator.

3) Field System

The workstation has been upgraded to FSL9. We're running FS 9.11.19.
