

TOG 2023

Matteo Stagni (INAF)

vlbeer

- EVN account part of our general LDAP accounts @IRA since ...
- Able to log in to several machines
- Broken into October 29th 2022

vlbeer

- Not out of the woods yet
- On December 13th 2012 laert from our NREN provider GARR - found out that from the new host vlbeer there have been a number of ssh connections to a darknet/honeypot
- Need for more tight security

mitigation

- vlbeer.ira.inaf.it moved to a temporary server on our vlbi network (90.147.132.x)
- evn account now local
- Data still backed up on our backup server daily (and monthly)

Future

- EVN to become an SFTP only account?
- If ssh needed to run scripts or other operations maybe RSA key exchange for each antenna?
- Restructure directories? Eg mmmmyy -> YYYY-mm-dd
